Skills

I am proficient at building computers from scratch and typically can diagnose a problem, whether a tablet, phone, desktop, or laptop. I have used macs, windows, and Chromebooks before. I have designed different apps for games and other lifestyle purposes at home. I am also in many alphas and beta testing programs to add in my input and advice to help better game development. I put together videos for friends and help to draw up thumbnails or profile pictures for their Youtube videos on their channels.

Currently, I am learning Java, Excel, C++, Assembly, and Python in my Computer Science courses. I have taught myself GML and C# to design games for myself and my friends. I am also taking time to learn machine learning and Artificial Intelligence in my free time.

Experience

May 2013 - August 2018

Arbor Oaks - Andover - *Computer and Tablet Repairs*

- Helped to fix the laptops and tablets.
- Diagnosed problems and helped others fix them.
- Taught others fixes and ways to solve problems with technology.

June 2019 - August 2019

Activision - Eden Prairie - *Quality Assurance Testing*

- Ran through games and projects to find and understand bugs and other individual issues.
- Worked with a team to coordinate and delegate individual or team tasks.
- Helped show new people how to pick things up quickly and efficiently.

February 2020 - Current

Saint John's University - Saint Joseph - *All-College Choir Rehearsal Assistant*

- Organize pieces of music.
- Help students learn their sheet music and improve singing qualities.
- Prepared the lessons for each week to operate smoothly during class.

Education

September 2014 - June 2018

Andover High School, Andover MN

Graduated through four years of high school with a focus on the arts.

August 2018 - Current

Saint John's University, Saint Joseph MN

Currently, studying Computer Science and a minor in Art.

Computer Skills

I help people whether friends or family or others fix problems and help clean up their computers whether it be doing cable management or by trying to install something to fix a problem or to add on to their computer or electronics at hand. I sometimes help others fix problems with stuff like their routers, install a new type of hard drive, graphics card, etc. I've also helped build computers from scratch for myself, friends, and others. I learned how to use Mac OS, Windows Computers, and Linux.
